Summary

AI researcher and engineer with five years of combined research and teaching experience, currently completing a Ph.D. on multi-agent LLM systems. Builds language and vision models end to end: efficient inference (quantization, knowledge distillation, pruning), vision-language modeling on clinical data, and reasoning-augmented agent pipelines. Delivers government- and industry-funded projects on schedule, with peer-reviewed publications in knowledge graphs and computer vision. Seeking research scientist or machine learning engineer roles in applied LLM and multimodal systems.

Technical Skills

Languages	Python (primary), C/C++, Java, SQL, JavaScript, HTML/CSS
ML & DL	PyTorch, Keras/TensorFlow, Hugging Face Transformers, scikit-learn, NumPy, pandas
LLM & Agents	Fine-tuning (LoRA/PEFT), quantization, knowledge distillation, structured pruning, retrieval-augmented generation, multi-agent orchestration, prompt and tool-use design, neuro-symbolic reasoning and output verification
Multimodal & CV	Vision-language models, image captioning and VQA (MIMIC-CXR), person and vehicle re-identification, attention mechanisms, object detection
Time Series	LSTM and sequence models for demand forecasting, scheduling and optimization
Tooling	Git, Linux, Docker, Anaconda, Jupyter, VS Code, Django, Weka, R Studio

Research & Professional Experience

Graduate Researcher — AI Agents & Language Models

Mar 2024 – Present

Kyung Hee University, Gyeonggi-do, South Korea

- Designing a multi-agent LLM system for cardiovascular disease diagnostics and patient health literacy under a Korean government-funded research programme.
- Building lightweight healthcare language models using quantization, knowledge distillation and structured pruning to cut inference cost while preserving diagnostic accuracy.
- Developing vision-language models over the MIMIC chest X-ray corpus for clinical question answering and automated medical report generation.
- Implementing a proof-reasoner component that verifies LLM-generated clinical claims against a symbolic knowledge base, reducing unsupported outputs.
- Co-authoring grant proposals and project deliverables alongside peer-reviewed publications.

Lecturer — Department of Software Engineering

Oct 2022 – Feb 2024

University of Central Punjab (UCP), Lahore, Pakistan / [faculty profile](#)

- Taught seven undergraduate courses across three semesters, including Introduction to Machine Learning, Image Processing, Programming Fundamentals, Databases, Operating Systems and Discrete Structures.
- Supervised undergraduate final-year projects in machine learning and computer vision from proposal through defence; served on the “Become a Globalized University” strategic committee.

Lecturer — Department of Software Engineering

Sep 2021 – Nov 2022

University of Lahore (UOL), Lahore, Pakistan

- Taught Artificial Intelligence, Operating Systems, Human-Computer Interaction, Discrete Structures and Introduction to ICT across the Fall 2021 – Fall 2022 semesters.
- Member of the Final-Year Project committee; organized workshops on L^AT_EX document engineering and full-stack web development (MERN, Laravel, React Native).

Research Assistant — Machine Vision & Intelligent Systems Lab

Feb 2020 – Apr 2021

National University of Sciences & Technology (NUST), Islamabad, Pakistan

- Developed IAB-Net, an attention-based deep network for person re-identification across non-overlapping surveillance cameras; owned the full cycle from dataset curation and model design through ablation studies, published and presented at ICoDT2 2021.

Selected Projects

Lightweight Language Model for Healthcare

2024 – Present

Kyung Hee University | Python, PyTorch, Hugging Face

- Neuro-symbolic small language model for medical diagnosis support: health literacy, disease detection, treatment recommendation and medical report generation.
- Owned the model-efficiency workstream (quantization, distillation, pruning) and the vision-language pipeline on MIMIC.

AI-Based Energy Management Solution — Japan Market

2024 – Present

Kyung Hee University | Python, PyTorch, Keras, LSTM

- Built the Self Demand Response (SDR) component that adjusts household and facility energy use in response to grid supply conditions and price signals.
- Unified heterogeneous consumption datasets and trained LSTM forecasting models driving the SDR policy; designed the battery-storage scheduling algorithm.

IAB-Net — Informative & Attention-Based Person Re-Identification

2020 – 2021

M.S. thesis, NUST | Python, PyTorch

- Attention module that suppresses background clutter and emphasises discriminative body regions, improving matching across camera viewpoint and illumination changes.

Education

Ph.D. in Computer Engineering — Artificial Intelligence

Mar 2024 – Present

Kyung Hee University (KHU), Gyeonggi-do, South Korea | CGPA 4.25 / 4.30 (99.33 percentile) | Presidential Scholarship

Coursework: Advanced Computer Vision, AI Advanced Research Project I–II, Future Biomedical Engineering Technology, Blockchain in Medical Technology, Creative Software I–II

M.S. in Computer Science

Sep 2018 – Apr 2021

National University of Sciences & Technology (NUST), Islamabad, Pakistan

Thesis: Informative Attention-Based Deep Network (IAB-Net) for Person Re-Identification

B.S. in Computer Science

Oct 2014 – Jun 2018

The Islamia University of Bahawalpur (IUB), Pakistan | 1st position, semesters 2–8 | Bronze Medalist

Honours, Awards & Certifications

- **Presidential Scholarship**, Kyung Hee University — full Ph.D. funding awarded for academic excellence, 2024–2028.
- **Outstanding Performer**, Federal Employees Benevolent & Group Insurance Funds (FEBGIF), Pakistan, 2021.
- **Bronze Medalist and 1st position (semesters 2–8)**, The Islamia University of Bahawalpur, 2018.
- **Certifications**: MIT CITI Data & Specimens Only Research (2024) · IBM Data Analysis and Machine Learning with Python (2023) · PIAIC Certified Cloud Native Developer (2023) · Harvard Launching Breakthrough Technologies (2019).
